DETAILED ACTION

Claims 1-20 are canceled.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21, 22, 24, 25, 29, 30, 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Sigmon et al. (5,739,723).

Regarding claim 21, Sigmon et al. disclose Doherty power amplifier comprising: elements (200-215) can be read as a linear amplifier bias circuit having first means via (117); and elements (220-245) can be read as a non-linear amplifier bias circuit having a second means via (137) which is a combination of the first mean output from amplifier (200); wherein the linear and non-linear amplifier bias circuit having the inherent function as claimed.

Regarding claims 22, 30, wherein amplifier (115) can be read as a linear amplifier and the linear amplifier bias circuit having one terminal of the amplifier (200) coupled to the ground which can be read as a reference device.

Regarding claims 24, 32, wherein each means has different voltage via supply voltages (215, 230).

Art Unit: 2817

Regarding claim 25, wherein amplifier (115) can be either FET or bipolar transistor having its source/emitter grounded and that amplifier (115) is a carrier amplifier.

Allowable Subject Matter

Claims 23, 26-28, 31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 23, 26-28, 31 are allowed over the prior art because none of the prior art disclosed or suggested showing the particular structure and/or operation recited in these claims namely:

Claims 23, 26-28, 31 call for, among others, a current mirror, a voltage buffer, and a scale/level shift circuit.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Sigmon et al. (6,097,252); Dent et al. (6,285,251)) show further analogous prior art circuitry.

These arts are deemed relevant and should be carefully reviews before any amendment is filed.
